

## **SPECIFICATION AMENDMENTS**

The specification at paragraph [0033] has been rewritten as follows:

[0033] Referring specifically to Figs. 3, 3A, 6, 7 and 8, a valve seat member 34 is preferably made out of plastic and is press fit over the valve seat receiving area 32. By this arrangement, fluid passage is allowed axially between the buttresses 30, while side loads on the valve seat member 34 are directed to the thicker base of the ribs where they are better absorbed. An alignment shelf 36 is preferably provided on the fluid control valve body 12 for providing proper depth of alignment of the valve seat member 34. A ball valve 38 is preferably held between the valve seat 40 and the valve seat receiving area 32. The valve seat member 34 preferably provides a passageway 42 to the fluid control passage 20. The ball valve 38 is preferably operable to selectively cut off supply of flow from the pressure supply channel 18 to the pressure control passage 20.
